\* The varieties contain the resistant gene/s \* that known for now, however, resistant strains may exhibit some disease symptoms or damage under heavy pest pressure and/or under adverse environmental conditions. Soil temperature above 27°C and other stresses may cause nematode resistance to break.

\*\* Please refer to the ISF definition of this term at <http://www.worldseed.org/>. A copy of the definitions for terms describing reactions of plants to pests for the Vegetable Seed Industry, can be obtained at our offices upon demand.
